SUMMARY

Computer Science undergraduate focused on backend and full-stack development.

Experienced in building scalable web applications and distributed systems using Node.js, Express.js, Java, and databases like PostgreSQL and MongoDB. Strong foundation in Data Structures, DBMS, and system design, with active open-source contributions and hands-on project development.

SKILLS

Languages: C, C++, Python, JavaScript, Java

Web & Backend: HTML, CSS, Node.js, Express.js, PHP

Databases: MySQL, PostgreSQL, MongoDB, Firebase, Supabase

Core CS: DSA, OOP, DBMS, Operating Systems, Computer Networks

Tools: Git, GitHub, Linux, VS Code

PROJECTS

AgriSense – AI-Powered Agriculture Assistance Platform | React, Node.js, Express.js, Python, PostgreSQL

- Built a microservice-based full-stack platform for crop recommendation and pest analysis workflows.
- Developed Node.js/Express backend with JWT authentication, REST APIs, validation, and database integration.
- Integrated Python ML service with Node backend for inference handling and deployed services with production-ready architecture.

Scalable Distributed Storage System | Java, Spring Boot, Docker, SQLite

- Built a distributed storage system inspired by GFS and HDFS with chunk-based storage, replication, and fault-tolerant architecture.
- Implemented heartbeat-based failure detection, automatic re-replication, SHA-256 integrity verification, and metadata coordination across storage nodes.
- Simulated multi-node distributed environments using Docker containers, strengthening understanding of distributed systems and storage architecture.

OPEN SOURCE CONTRIBUTIONS

- Contributed to Hoppscotch by fixing a critical CLI test logic bug; PR #6122 successfully merged.
- Contributed to Electron by resolving Chinese localization issues via Crowdin (enum values , formatting, broken links).

EDUCATION

Bachelor of Engineering in Computer Science

KLE Institute of Technology, Hubli | CGPA: 8.41 | Expected Graduation: 2027

ACHIEVEMENTS

-
- Participated in national and inter-college hackathons, working in teams to build software solutions.
 - Developed and presented functional prototypes under time constraints.
