Summary

Computer Science undergraduate focused on backend development and scalable systems. Hands-on experience with Java, Spring Boot, and Python, building backend, full-stack, and AI-integrated applications. Active open-source contributor with experience shipping projects and quickly adapting to new technologies.

Education

Year	Degree/Exam	Institute	CGPA / %
2027	B.E. in Computer Science	KLE Institute of Technology, Hubli (VTU)	8.57 / 10
2023	Pre-University Course (XII)	Sai Niketan PU College, Jamkhandi	91.12%
2021	SSLC (X)	PKMS, Siddhapur	97.64%

Technical Skills

Languages: Java, Python, JavaScript, C, C++

Web & Backend: Spring Boot, REST APIs, JPA, Node.js, FastAPI, React, JWT, Redis

Databases: MySQL, PostgreSQL, MongoDB, SQLite

Tools & Cloud: Git, GitHub Actions, Docker, OpenStack, WSL, Postman, Jira

Projects

Scalable Distributed Storage System | *Java, Spring Boot, Docker, GitHub Actions, OpenStack* **Aug 2026 – Present**

- Built a distributed storage system inspired by HDFS with chunk-based storage, replication, and fault-tolerant architecture.
- Implemented heartbeat-based failure detection, automatic re-replication, SHA-256 integrity verification, and metadata coordination across storage nodes.
- Deployed and tested the system in a multi-node OpenStack private-cloud environment using Docker, enabling real-world testing of node failures, replication, recovery, and distributed storage operations.

Audio2Notes AI | *FastAPI, PostgreSQL, React, JWT, Whisper, FAISS* **Feb 2026 – Jun 2026**

- Built a full-stack AI lecture assistant with FastAPI, PostgreSQL, and JWT authentication, featuring an end-to-end pipeline for Whisper-based transcription, AI note generation, and PDF/DOCX/TXT export.
- Implemented RAG for grounded Q&A over lecture transcripts, with multi-LLM support (OpenRouter, Mistral, local Ollama) and automatic fallback.
- Developed responsive React and React Native apps for authentication, transcript approval, and session history.

Studium | *Electron, Node.js, JavaScript* **Jan 2026 – Feb 2026**

- Built a lightweight Electron-based desktop browser optimized for PDF-heavy study sessions, observing ∼300–450 MB memory usage during manual PDF and multi-tab testing, compared with ∼500–700 MB in Chrome/Edge under similar workloads.
- Engineered memory-conscious rendering with webview isolation and active cleanup after PDF close, eliminating background rendering leaks common in Chromium.
- Packaged and shipped a production Windows installer via Electron Builder, completing the full build in a 20-day sprint.

Open Source Contributions

Hoppscotch **PR #6122 (merged)**

- Fixed a bug in the Hoppscotch CLI where a test-result helper did not match its documented behavior, so test results are reported correctly.
- Discussed with maintainers what else depended on the helper, and chose a small, low-risk naming change (`hasAllTestsPassed`) instead of changing the logic.

Oppia **PR #26866 (merged)**

- Updated 10 Angular components to pass strict template type-checking: fixed type mismatches in templates and replaced use of private service members with public wrapper methods.
- Investigated flaky Puppeteer acceptance tests in GitHub Actions CI using logs and stack traces; added unit tests to meet the frontend coverage requirement.

Achievements

- **Top 6 of 160+ teams** at **Wave 2.0** for RiskRadar, a risk-analysis web app and browser extension.
- **Top 15 of 430+ teams** at **Hackkshetra 2.0** (VVCE Mysore), Agriculture domain.
- **4th place** at **Vibathon**: built Silent SOS, a solo emergency-response mobile app, in 6 hours.
- Solved **250+ problems** on **LeetCode** (rating **1480+**).
