Summary

Computer Science undergraduate with hands-on experience building backend, full-stack, and Android applications. Experienced in Java, Spring Boot, REST APIs, databases, and distributed systems, with additional exposure to Kotlin and modern application development. Active open-source contributor with merged contributions to established projects.

Education

Year	Degree/Exam	Institute	CGPA / %
2027	B.E. in Computer Science	KLE Institute of Technology, Hubli (VTU)	8.57 / 10
2023	Pre-University Course (XII)	Sai Niketan PU College, Jamkhandi	91.12%
2021	SSLC (X)	PKMS, Siddhapur	97.64%

Technical Skills

Languages: Java, Python, Kotlin, JavaScript, C++

Web & Backend: Spring Boot, REST APIs, JPA, Node.js, React, JWT, Redis

Databases: MySQL, PostgreSQL, MongoDB, SQLite

Tools & Cloud: Git, GitHub Actions, Docker, OpenStack, WSL, Postman, Jira

Projects

Scalable Distributed Storage System | *Java, Spring Boot, Docker, GitHub Actions, OpenStack* **Aug 2026 – Present**

- Built a distributed storage system inspired by HDFS with chunk-based storage, replication, and fault-tolerant architecture.
- Implemented heartbeat-based failure detection, automatic re-replication, SHA-256 integrity verification, and metadata coordination across storage nodes.
- Deployed and tested a multi-node architecture in a college OpenStack private-cloud environment, using Docker to simulate storage nodes and validate failure recovery and replication workflows.

URL Shortener | *Spring Security, Hibernate, MySQL, Redis(Valkey)* **2026**

- Developed a full-stack URL shortening platform using Spring Boot and React, supporting custom aliases, configurable URL expiration, and user-specific URL management.
- Implemented JWT-based authentication with Spring Security and a layered Controller-Service-Repository architecture using Spring Data JPA and MySQL.
- Integrated Redis-compatible Valkey caching with database fallback for URL redirection, alongside click analytics and rate limiting.

Gitread.me | *Kotlin, Jetpack Compose, Room, OkHttp* **2026**

- Integrated GitHub REST API to browse repository trees and Markdown files, supporting repository, branch, and folder navigation.
- Implemented SHA-based cache validation and offline document access using Room, with repository-level synchronization and persistent reading history.
- Designed a layered architecture using ViewModels and repositories, with CommonMark/GFM rendering, document search, and AES-256-GCM encrypted GitHub token storage using Android Keystore.

Open Source Contributions

Hoppscotch **PR #6122 (merged)**

- Fixed a bug in the Hoppscotch CLI where a test-result helper did not match its documented behavior, so test results are reported correctly.
- Discussed with maintainers what else depended on the helper, and chose a small, low-risk naming change (`hasAllTestsPassed`) instead of changing the logic.

Oppia **PR #26866 (merged)**

- Updated 10 Angular components to pass strict template type-checking: fixed type mismatches in templates and replaced use of private service members with public wrapper methods.
- Investigated flaky Puppeteer acceptance tests in GitHub Actions CI using logs and stack traces; added unit tests to meet the frontend coverage requirement.

Achievements

- **Top 6 of 160+ teams** at **Wave 2.0** for RiskRadar, a risk-analysis web app and browser extension.
- **Top 15 of 430+ teams** at **Hackkshetra 2.0** (VVCE Mysore), Agriculture domain.
- **4th place** at **Vibathon**: built Silent SOS, a solo emergency-response mobile app, in 6 hours.
- Solved **250+ problems** on **LeetCode** (rating **1480+**).
